

TERRA FEED, LLC PRODUCT DESCRIPTIONS

Soil Symphony Program

Terra Feed products are all designed following these basic principles:

- 1 – Feeding soil organisms high energy materials**
- 2 – Balancing fertility in the soil and enhancing nutrient availability and uptake**
- 3 – Improving nutrient and water quality and availability in the soil by correcting soil pH**
- 4 – Suppressing plant and soil pests and disease**
- 5 – Providing positional stability of foliar applied materials**

Terra Feed Products

ACS – Agricultural Carbon Source is a filtered molasses material containing high levels of sugars and other food stocks for microbes, “Fuel for the soil”.

Sulfur-CARB – A source of elemental sulfur to facilitate pH reduction of the soil environment and containing energy to fuel the oxidation of sulfur for expedited and safe reaction in the root zone.

Nutra-TAC – An adjuvant containing a sugar polymer material used with foliar application of nutrients and other chemicals to stick them to leaf surfaces. The polymer in Nutra-TAC is also a feed stock (elicitor) for specific bacteria that fight crop disease, and can be used in soil application strategies.

SBS(A) – Soil Biological Symphony (A) is a unique mixture of bacteria that suppress diseases and many crop pests.

SBS(B) – Soil Biological Symphony (B) is a blend of fungal organisms that suppress disease organisms and many soil pests.

SSA – Soil Symphony Amendment is a dry (pelletized or fine crumble) high energy feed stock that supplies extended fuel, energy and other materials for soil microbes.

Terra Feed Programs and Quality

Terra Feed materials and technologies are all produced using strict formulation guidelines, using only the highest quality ingredients. Partners in the supply chain and manufacturing process for Terra Feed all adhere to the same quality standards.

We participate with private and university professional organizations to validate product and program performance. Terra Feed adheres to and uses strict agronomic principles in all application or use strategies. Our models are time tested and developed to help the client produce better crops with reduced environmental damage.

Terra Feed products and programs focus on the 5th R of Crop Production – “The Right Environment”. We address issues and opportunities using basic principles that have been tested over time. Soil Symphony Programs build harmony and sustainability for crop production.
