

LAKE JEM SOD

Rick Carter – Grower

11-25-14

My name is Rick Carter and I am the grower for Lake Jem Farms. We grow approximately 600 acres of turf grasses.

We began using ACS in the spring of 2014 and right away we began to notice a better color in the grass and a more, dense and thicker root system. This made the slabs of grass easier to lift at harvest. We also saw a better control of insects during the periods of high infestation.

In previous years, during the very rainy season, there were places on the farm that, because of the makeup of the soil, did not drain and water stood for long periods of time. This happened again in late September and early October of this year. When the water stands for long periods of time, a week to ten days, the grass loses its color because of the waterlogged root system. This year, however, the grass rebounded much quicker than in previous seasons. I can only attribute this improvement to the use of ACS.

I believe the use of ACS has made growing easier, and has improved the yield and quality of our turf grasses. We will continue to use this product and wish to thank Buford Creech for his untiring efforts to help us improve our growing practices.
